ST. CECILIA'S COLLEGE – CEBU INC.

PREVENTIVE PHYSICAL

&

DETTERENT PHYSICAL

CONTROL

(IAS Documentation)

Prepared By:

GROUP 4

Candilanza, Ivon Lawrence

Dela Victoria, Tyrone James

Geocallo, Camille Joyce

Paquit, Mark Kevin Gie

Pengoc, Jorvin

Sellar, Mylene

Instructor:
Doc. Ryan Quieroga

Schedule: Saturday (7:30 am - 12:30 nn)
Date: 02/07/2026

No.	Name	Attendance
1	Alcala, Jericho D.	P
2	Ababa, Frans Bobby B.	P
3	Alegado, Jesriel V.	P
4	Bacacao, Hiedelou P.	P
5	Balbon, Ashley P.	P
6	Bohol, Claire C.	AB
7	Bolambot, Keycee S.	P
8	Candilanza, Ivon Lawrence O.	P
9	Canoy, Lyle Steve Q.	P
10	Deguma, Twengcle, N.	P
11	Dela Victoria, Tyrone James	P
12	Esconde John Phil G.	P
13	Geocallo, Camille Joyce S.	P
14	Javeluna, Jwymeth Louise G.	P
15	Jopia, Jay M.	P
16	Libios, Justene Lou P.	P
17	Mangila, John Micole S.	P
18	Muralla, Mikhail B.	AB
19	Nogra, Jonash Ariel S.	P

20	Osabel, Jhay M.	P
21	Paquit, Mark Kiven Gie A.	P
22	Pengoc, Jorvin T.	P
23	Racaza, John Lloyd G.	AB
24	Requiroso, Aaron	P
25	Sasuman, Angielica D.	P
26	Sellar, Mylene R.	P
27	Somera, Jodee Dwayne Q.	P
28	Umpad, John Rey V.	P
29	Verioso, Mj S.	P
30	Villarino, Ivan	P
31	Victorillo, Kian D.	P
32	Violon, Marc Steven C.	P
33	Waskin, Queny Frecel P.	P

Schedule: Saturday (7:30 am - 12:30 nn)
Date: 01/17/2026
SCORES:

No.	Name	Pre-Test (15/15)	Post-Test (15/15)	Average
1	Alcala, Jericho D.	15	15	15

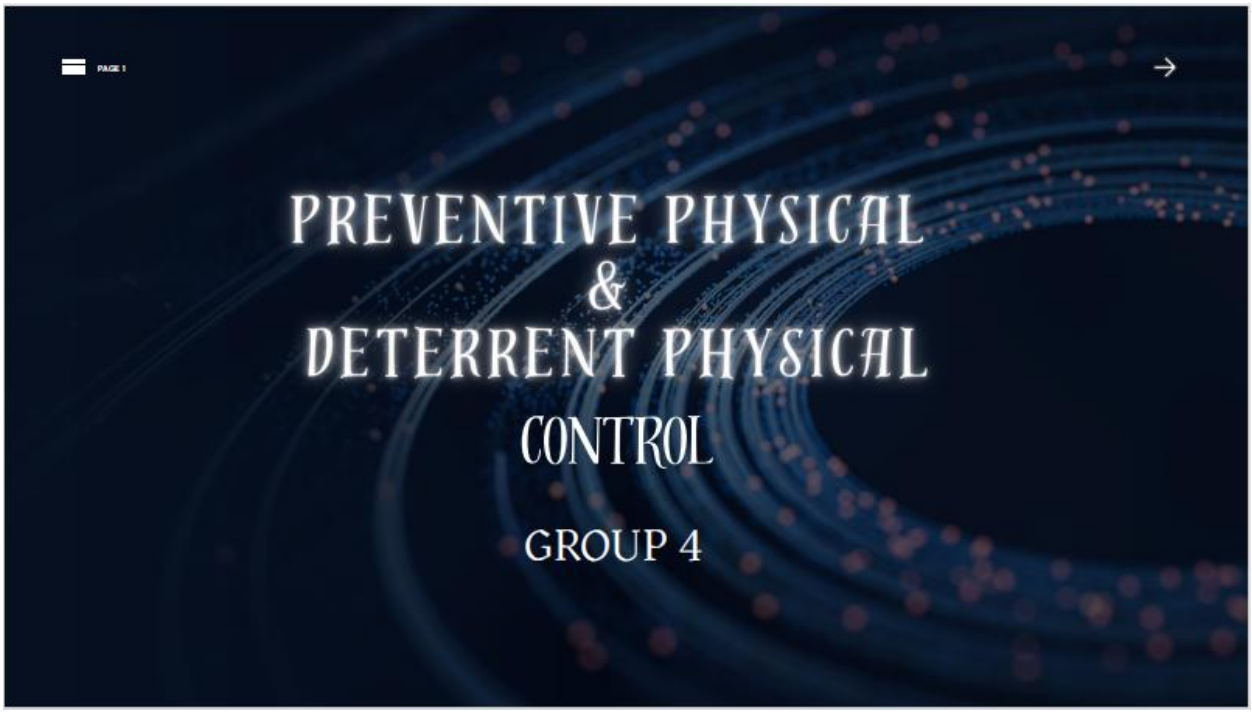
POWER POINT PRESENTATION:



Penetration Testing

Incident Response

- Physical controls ensure that only authorized personnel can access sensitive areas or devices.

- Two types of sub topic:

1. Preventive Physical
2. Detective / Deterrent Physical

PREVENTIVE PHYSICAL SECURITY

- are measures used to stop unauthorized physical access, damage, or interference to computer systems, facilities, and data before a security incident happens.

- it focuses on protecting physical devices and environments so attackers cannot physically reach computers, servers, or networks.

1. Access Control Systems

- Restricts physical entry to authorized individuals only.

Examples:

- Key card / RFID access
- PIN-based door locks

2. Physical Barriers

- Physical structures that block or limit access to facilities.

Examples:

- Looked Doors
- Security Gates

3. Anti-Tailgating Systems

- Prevents more than one person from entering using one authorization.

Example:

- Tailgating detection sensors
- Turnstile systems

4. Hardware Kill Switch

- Physically disconnects network or power access.

Example:

- Internet kill switch
- Power cut-off button

5. Environmental Controls

- Protects equipment from environmental threats.

Example:

- Fire suppression systems
- Smoke detectors
- Air conditioning systems
- Water leak detection systems

6. Power Protection Systems

- Ensures continuous operation and prevents sudden shutdowns.

Example:

- Uninterruptible Power Supply (UPS)
- Backup generators

7. Security Personn

- Human control that prevents unauthorized access through monitoring and enforcement

Example:

- Security guards
- Receptionists checking IDs

8. Surveillance and Monitoring (Preventive Use)

- Monitors areas to prevent unauthorized activity before it happens.

Example:

- CCTV cameras inside data centers
- Real-time monitoring systems

9. Visitor management is a

- preventive control because it helps stop unauthorized access and potential security or safety issues before they occur.

Examples (summarized):

- **Visitor sign-in and ID verification**
- **Issuing temporary visitor badges**

10. Biometric Access System

- A security system that uses unique physical traits like fingerprints, retina, or facial features to allow entry, preventing unauthorized access.

Example:

- Fingerprint scanner on a server room door that only lets registered employees enter.Real-time monitoring systems

DETENTIVE PHYSICAL SECURITY

- A deterrent control is a security measure designed to discourage or prevent unauthorized access or actions. It works by making potential attackers aware of security measures, such as visible cameras, warning signs, or security personnel, to reduce the likelihood of an incident.

1. Intrusion Alarm Systems
   - Detects physical breaches and alerts security personnel.

Examples:
- **Door and window sensors**

2. Honeypots
   - Decoy systems designed to attract attackers and detect malicious behavior.

Example:
- Fake servers or databases

PAGE 6

5. Panic Buttons
   - Alerts security when an unauthorized situation occurs

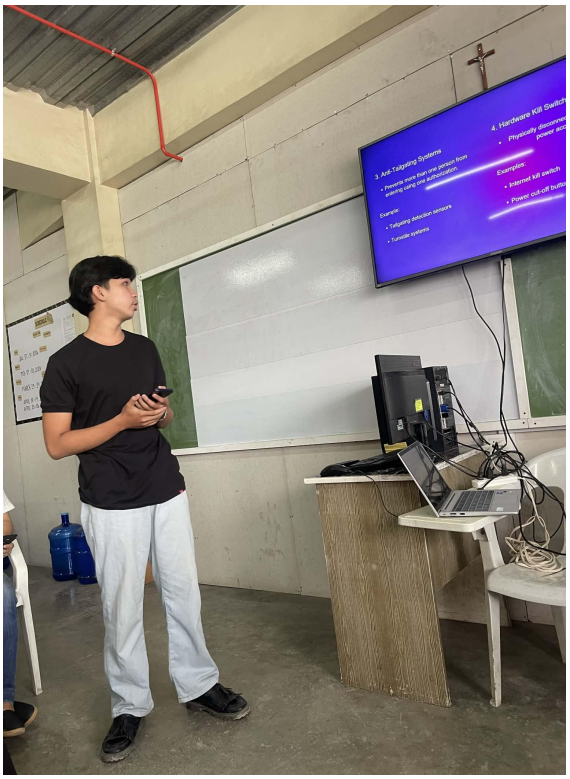
Examples:
- Wall-mounted emergency panic button

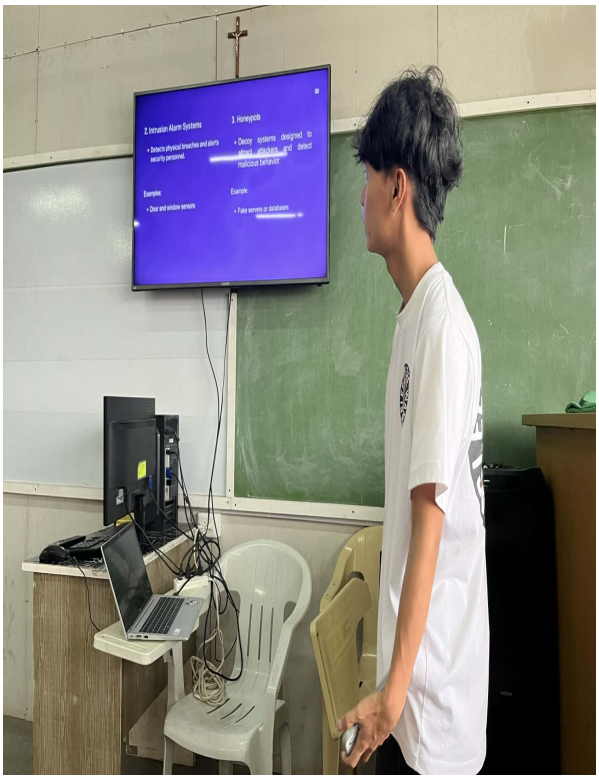
6. Door / Window Alarms
   - Detects forced entry

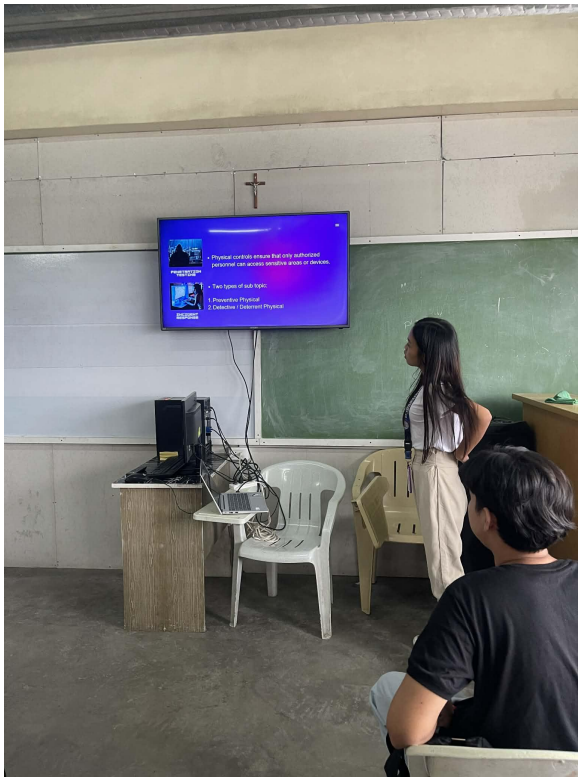
Example:
- Magnetic door/window alarm

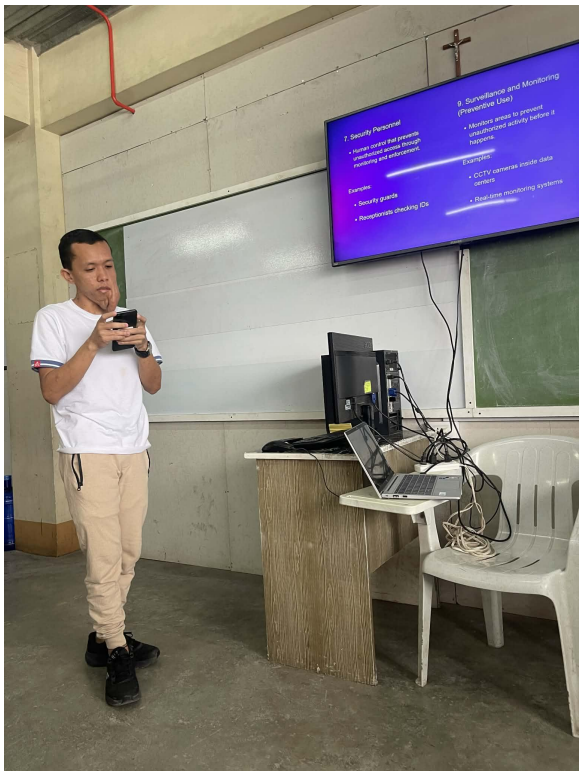
THANK YOU!

DOCUMENTATION:

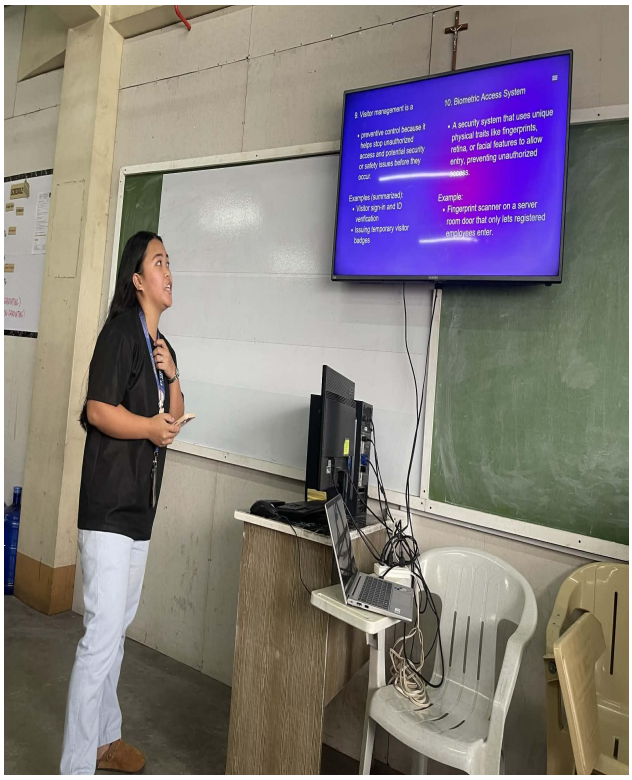








7. Security Personnel
• Human control that prevents misuse or crime through monitoring and enforcement.
Examples:
• Security guards
• Receptionists checking IDs
9. Surveillance and Monitoring (Preventive Use)
• Monitors areas to prevent unauthorized activity before it happens.
Examples:
• CCTV cameras inside data centers
• Real-time monitoring systems



8. Visitor management is a
• preventive control because it helps stop unauthorized access and potential security or safety issues before they occur.
Examples (summarized):
• Visitor sign-in and ID verification
• Issuing temporary visitor badges
10. Biometric Access System
• A security system that uses unique physical traits like fingerprints, retina, or facial features to allow entry, preventing unauthorized access.
Example:
• Fingerprint scanner on a server room door that only lets registered employees enter.

DETAILED NARRATIVE OF THE REPORT

1. **PHYSICAL SECURITY CONTROL**
   - refers to the measures and safeguards that protect an organization's physical assets, equipment, and facilities from unauthorized access, damage, or theft. These controls are part of cybersecurity because even the strongest digital protections can be bypassed if someone physically gains access to computers, servers, or network equipment.

KEYPOINTS:

- Focuses on protecting hardware, servers, devices, and physical infrastructure.
- Prevents unauthorized personnel from accessing sensitive information.
- Works together with digital security measures to secure overall information systems.

TWO TYPES OF PHYSICAL CONTROL

1. **PREVENTIVE PHYSICAL**

- preventive physical controls are measures implemented to stop security incidents before they occur by restricting or controlling access to physical assets, facilities, and equipment. These controls are designed to protect computers, servers, network devices, and other critical hardware from unauthorized access, theft, damage, or misuse. Examples include access control systems such as ID cards, PIN codes, or biometric scanners that ensure only authorized personnel can enter secure areas; locked doors, gates, and fences that act as physical barriers; security personnel who monitor and regulate entry points; secure storage solutions like locked cabinets for sensitive documents or backup drives; and environmental safeguards such as fireproof rooms and climate-controlled server areas. By implementing these preventive physical controls, organizations reduce the risk of physical breaches and ensure that critical assets are safeguarded against potential threats before any harm can occur.

EXAMPLES OF PREVENTIVE PHYSICAL

1. **Access control** - refers to the systems and measures that restrict physical entry to authorized individuals only, ensuring that only those with proper credentials can access sensitive areas or devices. These controls are designed to prevent

unauthorized access before it happens, making them a preventive measure rather than a reactive one.

-Examples of access control include **ID card systems**, where employees or students swipe a card to gain entry; **PIN-based locks**, which require a numeric code; and **biometric systems**, such as fingerprint or facial recognition scanners. By verifying identity before allowing entry, access control protects critical assets like servers, network equipment, and confidential documents, and ensures that sensitive areas are only used by authorized personnel. This helps maintain both the **security and integrity of physical and digital resources** within an organization.

2. **Physical Barrier** - are preventive measures designed to restrict unauthorized physical access to sensitive areas, equipment, or information. They serve as a tangible obstacle that prevents individuals from reaching critical assets unless they are authorized.

   - By implementing physical barriers, organizations can reduce the **risk of theft, damage, or tampering**, ensuring that only authorized personnel can access critical resources, thereby maintaining the security and integrity of both physical and digital assets.

3.
